

Role: Backend Infrastructure Engineer (Distributed Systems) **Vibe:** High-scale, data-heavy, event-driven architectures.

Position: Backend Infrastructure Engineer (Distributed Systems) **Company:** DataStream Core

About the Role: We are seeking a Backend Infrastructure Engineer to build and scale our high-throughput data processing pipelines. You will be dealing with millions of concurrent events and must understand the intricacies of distributed systems, container orchestration, and message brokers.

Key Responsibilities:

- Design and implement scalable, low-latency microservices using **Golang (Go)** or **Python**.
- Architect event-driven systems utilizing **Apache Kafka** or RabbitMQ for real-time data streaming.
- Deploy, manage, and scale containerized applications using **Kubernetes (K8s)** and Docker.
- Optimize highly complex relational queries using **PostgreSQL** and manage distributed state caching with **Redis**.
- Build robust CI/CD pipelines using GitHub Actions and Jenkins to automate deployment testing.

Required Technical Skills:

- Languages: Python, Golang.
- Systems & Orchestration: Kubernetes, Docker, Linux administration.
- Databases & State: PostgreSQL, Redis, Cassandra.
- Streaming: Apache Kafka.
- Architecture: Event-Driven Microservices, gRPC, REST APIs.
